Test Name	Results	Units	Bio. Ref. Interval
Platelets are reduced. Giant platelets seen Followup and clinical correlation Urgent recheck of platelet count with a fresh E.D.T.A. sample in case the platelet count is not correlating clinically. Mean Platelet Volume	12.0	fL	6.5 - 12.0
ESR	12	mm/hr	0 - 15

Note

1. As per the recommendation of International council for Standardization in Hematology, the differential leucocyte counts are additionally being reported as absolute numbers of each cell in per unit volume of blood
2. Test conducted on EDTA whole blood

C-REACTIVE PROTEIN; CRP, SERUM (Immunoturbidimetry)	92.48	mg/L	<5.00

Comments

CRP is an acute phase reactant which is used in inflammatory disorders for monitoring course and effect of therapy. It is most useful as an indicator of activity in Rheumatoid arthritis, Rheumatic fever, tissue injury or necrosis and infections. As compared to ESR, CRP shows an earlier rise in inflammatory disorders which begins in 4-6 hrs, the intensity of the rise being higher than ESR and the recovery being earlier than ESR. Unlike ESR, CRP levels are not influenced by hematologic conditions like Anemia, Polycythemia etc.
